FastAPI

Certifications

Learning Python

Data Visualization Using Python

Data Analysis with Python

Develop GenAI Apps with Gemini
and Streamlit

AWS Machine Learning Foundations

Honors-Awards

Python Online Hackathon

Bhaveskumar Rathod

AI Engineer | Agentic AI • Multi-Agent Systems • RAG • LLM
Applications | Senior Software Engineer | Python | AWS & GCP
Ahmedabad, Gujarat, India

Summary

I am an AI Engineer and Senior Software Engineer with 5+ years of experience building scalable backend systems and production-grade AI applications. My background combines strong software engineering fundamentals with hands-on experience delivering Generative AI solutions. Over the years, I have designed and developed distributed systems, microservices, APIs, data pipelines, and cloud-native applications using Python, FastAPI, Django, AWS, and GCP. More recently, I have been focused on Generative AI, Retrieval-Augmented Generation (RAG), and Agentic AI systems, helping organizations automate workflows, improve decision-making, and unlock value from enterprise data. I have contributed to client-facing AI solutions using Google Gemini, Vertex AI, BigQuery, and modern cloud architectures, delivering measurable business outcomes including significant reductions in manual effort and substantial improvements in system performance. My experience spans the full lifecycle of AI-powered applications, from data ingestion and retrieval pipelines to LLM orchestration, prompt engineering, recommendation systems, evaluation, and production deployment. I enjoy solving complex engineering challenges and building reliable, scalable, and maintainable systems that create real business impact.

Core Areas of Expertise:

- Generative AI & LLM Applications
- Agentic AI & Multi-Agent Systems
- Retrieval-Augmented Generation (RAG)
- AI System Design & Architecture
- Python Backend Engineering
- Distributed Systems & Microservices
- Cloud Platforms (AWS & GCP)
- API Design & Scalable Services

I am particularly interested in building intelligent products where AI and software engineering intersect, transforming ideas into production-ready systems that deliver measurable value at scale.

Experience

Talentica Software

2 years 10 months

Senior Software Engineer

April 2026 - Present (7 months)

Pune District

- * Architected and delivered a production-grade Multi-Agent AI platform leveraging A2A for agent-to-agent communication and MCP for tool calling, with LLM orchestration, RAG, and FastAPI to enable autonomous agent collaboration, intelligent task routing, and enterprise workflow automation.

Software Engineer II

January 2024 - March 2026 (2 years 3 months)

Pune District

- * Led the development of a GenAI-powered Makegood recommendation system using Vertex AI, Google Gemini, and Google ADK, architecting event-driven GCP workflows with Pub/Sub and leveraging GCS and BigQuery for data processing and storage; implemented AI Guardrails for Responsible AI, automated ad spot recommendations, and reduced manual effort by 70%.
- * Implemented OpenTelemetry and Langfuse-based observability for agent workflows, analyzing traces to identify performance bottlenecks and reducing agent response time from 3 minutes to 1 minute (67%).
- * Optimized a Django API, improving processing from 1,200 records per minute to 4 seconds and achieving a 94% performance improvement through advanced data-handling techniques.
- * Developed and enhanced key solutions for the Game Management System (GMS), including Razorpay payment gateway integration and payment workflow improvements, supporting seven national championships across India and serving over 90,000 athletes.
- * Revamped critical backend processes, reducing execution times from 30–40 minutes to milliseconds and significantly improving application responsiveness.
- * Led the migration of media storage from local EC2 instances to Amazon S3, enabling scalable and centralized storage for enterprise media workloads while maintaining 100% backward compatibility with existing application workflows.
- * Automated refund-failure monitoring using AWS CloudWatch and Lambda with real-time Slack alerts, enabling 24/7 monitoring and accelerating the detection and resolution of critical refund issues.

Online PSB Loans

Python Developer

July 2022 - December 2023 (1 year 6 months)

Ahmedabad, Gujarat, India

- Developed Django API that served 14+ Indian Banks to find duplicate customers using their details.
- Designed Oracle database tables with advanced methods of partitioning & indexing such that the query is optimized and faster.
- CAM-pdf scraped and dumped into Excel files with insightful charts, enabling the customers to understand their financials better with visuals.
- Designed and implemented ELT pipelines in Python to seamlessly fetch data from different databases, perform analysis processes, and generate insightful Excel files. It greatly reduced daily 2 hours of manual human work.
- Optimized application using the implementation of Multithreading, which decreased response time by 25%.
- Implemented the encryption and decryption (asymmetric cryptography) mechanism in the application to ensure robustness and reliability.
- Developed analytical reports for the application, which helped in analyzing the API performance, errors and also in the billing to the client

Klearcom

Junior Software Engineer

September 2021 - July 2022 (11 months)

Ireland

- Developed IVR-Intent-extraction algorithm with ~99% accuracy which reduced manual intervention of humans.
- Developed a Process logs and send email alerts script, which significantly reduced system downtime and process queues by 75% due to critical errors. This ensured the robustness of the system.
- Increased the IVR strings matching algorithm from 80% to 98% through enhanced preprocessing and advanced string matching algorithms which ensured the reliability of the system.
- Developed a Bash script for streamlined Git pulls across 15 servers, relieving developers from the manual effort of connecting to individual servers for update

FlyingSpark Infotech

Data Scientist

June 2021 - September 2021 (4 months)

Remote

- Developed an Anime Recommendation system using a collaborative filtering technique.
- Converted unstructured logs data into an informative structured format that reduced 100% human efforts, which decreased the reading time of logs and increased the analytics team's productivity.

FlyingSpark Infotech

Data Scientist Intern

November 2020 - March 2021 (5 months)

Chandigarh, India

- Data Collection from various sources using web-scraping, Analysing the data, Data Cleaning, Data Preparations, Model Building, Model Evaluation, Deploying the model, getting the feedback and doing the same process again.
- Converting the unstructured data into a structured format.
- Exploring machine learning, deep learning and python programming in deep.

Amalthea, IIT Gandhinagar

Campus Ambassador

November 2020 - February 2021 (4 months)

Remote

The Sparks Foundation

Data Scientist & Business Analyst Intern

October 2020 - November 2020 (2 months)

Ahmadabad, Gujarat, India

- Learned about various ML algorithms, Implemented them and Deployed them using flask framework.
- Made some cool web applications to solve a problem.

JPMorgan Chase & Co.

Software Engineer Virtual Experience

August 2020 - October 2020 (3 months)

Ahmadabad, Gujarat, India

Inference with a stock price data feed, Used JPMorgan Chase framework and tools and Display data visually for traders.

Education

VISHWAKARMA GOVERNMENT ENGINEERING COLLEGE,
CHANDKHEDA,GANDHINAGAR 017

Bachelor of Engineering, Information Technology · (2017 - 2021)
